SECTION R309 GARAGES AND CARPORTS

R309.1 Opening protection. Openings from a private garage directly into a room used for sleeping purposes shall not be permitted. Other openings between the garage and residence shall be equipped with $\frac{3}{4}$ -hour fire-protection-rated assemblies equipped with self-closing devices.

R309.1.1 Duct penetration. Ducts in the garage and ducts penetrating the walls or ceilings separating the dwelling from the garage shall be constructed of a minimum No. 26 gage (0.48 mm) sheet steel or other approved material and shall have no openings into the garage.

R309.1.2 Other penetrations. Penetrations through the separation required in Section R309.2 shall be protected by filling the opening around the penetrating item with approved material to resist the free passage of flame and products of combustion.

R309.2 Separation required. The garage shall be separated from the residence and its attic area by horizontal or vertical separations conforming to Sections R309.2.1 and R309.2.2.

R309.2.1 Vertical separations. Where partitions are used to separate an attached garage from a living space or its attic, the partition assembly shall have a $\frac{3}{4}$ -hour fire-resistance rating.

Exception: In lieu of providing partitions that have a $\frac{3}{4}$ -hour fire-resistance rating, one layer of $\frac{5}{8}$ -inch thick, type-X, gypsum board may be installed on the garage side and one layer of $\frac{1}{2}$ -inch, type X, gypsum board may be installed on the opposite side. Application shall be in accordance with Section R702.3.

R309.2.2 Horizontal separations. Where horizontal construction is used to separate the garage from the living space or its attic, such construction shall be protected with one layer of $\frac{5}{8}$ -inch thick, type X, gypsum board, installed in accordance with the requirements of Section R805.1. Openings in horizontal separations shall not be permitted except where the residence is otherwise protected by vertical separations. Where the horizontal separation is a floor-ceiling assembly, the structure supporting the separation shall also be protected by not less than $\frac{5}{8}$ -inch (15.87 mm) type X gypsum board or equivalent.

R309.3 Floors. Garage floors shall be of approved noncombustible material.

The area of floor used for parking of automobiles or other vehicles shall be sloped to facilitate the movement of liquids to a drain or toward the main vehicle entry doorway.

R309.4 Carports. Carports shall be open on at least two sides. Carport floors shall be of approved noncombustible material. Carports not open on at least two sides shall be considered a garage and shall comply with the provisions of this section for garages.

Exception: Asphalt surfaces shall be permitted at ground level in carports.

The area of floor used for parking of automobiles or other vehicles shall be sloped to facilitate the movement of liquids to a drain or toward the main vehicle entry doorway.

R309.5 Flood hazard areas. For buildings located in flood hazard areas as established by Table R301.2(1), garage floors shall be:

1. Elevated to or above the design flood elevation as determined in Section R324; or
2. Located below the design flood elevation provided they are at or above grade on all sides, are used solely for parking, building access, or storage, meet the requirements of Section R324, and are otherwise constructed in accordance with this code.

R309.6

Automatic garage door openers. Automatic garage door openers, if provided, shall be listed in accordance with UL 325.
